

## Jonah Natural Gas Field - Wyoming, May 2006

Taken from a small plane this image shows 3 to 5 acre gas well pads in a 40 acre spacing. In our area of NEPA and Sullivan Cty, NY, the spacing is predicted to be a well every 25 to 30 acres - so the proposed gas wells would be even closer together here than these pictured in Wyoming. These were built in about seven years time.
